DETAILED ACTION

Double Patenting

1. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claim 1 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 4 of copending Application No. 10/575,519. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 4 of '519 application encompasses the limitations of claim 1 of instant application. In particular, Claim 4 of '519 application recites , a wireless device "medium sensing time histogram...occurrences...a predetermined time interval" (at least one activity pattern over the predetermined sensing interval). Furthermore, scanning the first station is a function of the wireless device in measuring the activity.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2616

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by McFarland et al PG-Pub 2004/0156336.

Re Claims 1, 15, McFarland et al teaches a WLAN system whereby a access point (a first station) builds a histogram (at least one activity pattern) of the traffic level from the BSS signals received from the mobile [0055], wherein access point performs the scanning of the wireless medium over a predetermined time period to measure the activity of the traffic level.

Re Claim 2, refer to claim 1, wherein the traffic level indicates the busy period and idle period.

Allowable Subject Matter

4. Claims 3-12, 16-21 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

In combination with claims 1 and 9, prior art fails to teach a first station using the derived activity pattern of the second station to discovery at least one of as claimed.

In combination with claims 15 and 16, prior art fails to teach control processor for performing at least one of simultaneous sensing during the sensing interval.

5. Claims 13 and 14 are allowed
